Agriculture Irrigational System

Features of H.Y Spray Tube for irrigational purpose

1. Water-saving equipment of spray irrigation that only requires low operational pressure ($0.5 \sim 0.7 \text{ kg/cm}^2$) to reach spray width range $4\text{M} \sim 5\text{M}$ and spray height about 170cm .
2. This spray tube gives off foggy shape of water spray to irrigate plants, with no omitted areas, leading to an efficient irrigational purpose.
3. It can be injected with chemical fertilizer to further nurture the cultivation of plants.
4. Ecologically, this PE irrigational spray tube serves the purpose of conservation of water and soil to your field.
5. Arranged row by row, this spray tube helps to shorten the time of irrigation and save the consumption of water.
6. Suited plants: Banana, oil palm, cocoa tree, watermelon, lappa, tomato, wheat, onion and many others.
